OPTIONAL

The range of optional accessories includes a roller pressure display so that this important parameter can be kept constantly under control.

A range of check forms is also available and with only three types of matrix it is possible to cover almost the entire range of standard road signals and work in ideal conditions on surfaces that have been made flat.

Wheels complete the accessories of this machine that has all the features to meet the most demanding professional's needs.

Professional laminator designed for the application of biadhesive materials coloured and reflective films on different backings and road signs.

The film and the backing pass through the rollers that ensure a perfect bond between the two parts and the total elimination of air. Learning to use the machine is fast and easy. The fact that it takes very little time to start up, its functionality combined with high quality components makes this machine a fast and perfectly performing unit for all operations.

Operating controls are easy to reach as they are all contained in a single panel that can be moved according to need. The photoelectric cells to prevent hand crushing make MNL - SIGN a safe and handy machine.

The upper roller coated with the latest and most reliable rubber mixes can laminate even the thinnest and most difficult types of film. When using films in rolls and not in sheets, the material takes just a few seconds to replace by simply taking out the roll shaft and locking the roll.
